

DO YOU REALLY KNOW HOW SECURE YOUR PASSWORDS ARE?

Everyone knows that it is important to ensure you are using strong passwords for all your logins, but did you know that how and where you save them is just as important to minimise risk of network infiltration. Keeper is a password management platform which allows users to store all their passwords in one place. Find out more about the importance of keeping your passwords secure and what steps you can take to improve.

ARE YOU READY FOR THE WINDOWS SERVER 2012 END OF LIFE?

Is your business operating on a Windows 2012 Server? As of the **10th of October** Microsoft will no longer support or provide patches to 2012 servers, leaving your organisation vulnerable to potential cyber attacks or breaches. We've put all the need to know information in a guide, [simply click on the picture to head straight to it.](#)

Drop the team a message at hello@bamboo.tech if you would like to explore what options are the best fit for your business.

It's time to retire your Windows Server 2012.

Microsoft are ending extended support for Windows Server 2012 on the 10th October 2023.

Schools are warned of cyber attack threats as the new year starts

As students head back for the new academic year, school leaders have been warned they must prepare for cyber attacks.

It's not if, but when.

Do you work in or with the education sector and need to know more?

[Take a look at the full article here.](#)

Google users are advised to upgrade their browser

Google have released an emergency security update after uncovering a fourth Chrome zero-day vulnerability. They are encouraging users to update to version 116.0.5845.187 (Mac) and 116.0.5845.187/.188 (Windows) as soon as possible.

STEPS TO SECURE YOUR SYSTEMS

STEP 1: STAY VIGILANT

Keep an eye on evolving attack tactics. These loaders are agile and always looking for different ways to bypass defences.

SIMON SAYS

The top malware loaders causing chaos this year are:

- QBot
- SocGhosh
- Raspberry Robin

These may sound like names we've just generated, however QBot is a 16-year banking trojan turned multipurpose threat, responsible for 30% of cyber attacks. SocGhosh is a crafty JavaScript-based loader with ties to Evil Crop and Raspberry Robin spreads via USB drives.

In the world of cyber security, proactive prevention is key to reducing these persistent threats. Stay alert, fortify your defences and keep your organisation safe. [Drop me an email](#) if you'd like to discuss your cyber set up.

STEP 2: MULTI-LAYER DEFENCE

Implement a multi-layered security approach. Combine firewalls, anti-virus and intrusion detection systems to create a robust defence against loaders and the malware they deliver.

STEP 3: EMPLOYEE TRAINING

Educate your employees on best practices and run regular campaigns as part of training.

CHANGE IS HAPPENING! ARE YOU READY?

There are lots of changes and events taking place over the next couple of months, so we wanted you to have all the details of what's happening so you are ready to rock and roll!

- **BT WLR SWITCH OFF** - STOP SELL 5TH OF SEPTEMBER
- **WINDOWS 2012 SERVER EoL** - 10TH OF OCTOBER
- **2G & 3G SWITCH OFF**
- **CYBER SECURITY MONTH** - OCTOBER 2023

We've linked the points above to further information.

BAMBOO BECOMES FRACTALSCAN SURFACE PARTNER

We are thrilled to announce we have partnered with FractalScan Surface to enhance our cyber security capabilities of our Digital Assurance solutions.

FractalScan Surface is an advanced attack surface management solution, built by ex UK government cyber security engineers. As digitisation continues at pace, understanding the risks your digital estate presents is key to an effective cyber security strategy. By incorporating attack surface management into our tools we are able to identify gaps in your cyber security and provide efficient and meaningful solutions to keep your business running smoothly. Get in touch to discuss how we can help your business enhance its cyber security.
